Winter triticale

TULUS

Low-Input-type, very healthy, high frost- and drought tolerance

Advantages:

- Single-ear-type with large and well-developed grains
- Extensive growing possible, very healthy, especially tolerant against yellow rust
- Late sowing possible

Cultivation:

Variety with importance in total Europe due to trustfully high yields and easy growing on dry and rough locations

Short profile:

| | = very low resistance/early/short, | ++++ = very high resistance/late/long |
