

TIFFANY

Low level of vicin and convicin are especially suitable for laying hens and poultry feeding

Advantages:

- Above-average protein yields with very low Vicin and Convicin Contents
- This special quality is interesting for poultry feeding
- High yielding field bean with medium to early maturity and good standing power

Short profile:

---- = very low resistance/early/short,

++++ = very high resistance/late/long

Cultivation:

Sowing depth	Heavy soil: 6-8 cm, light soil: 8-10 cm
Plant density	35-50 plants per m ² . The best possible row distance is 25-45 cm depending on the sowing method.
Sowing time	Depending on climatic and soil conditions, beginning at the end of February.
